1. Sacramento Valley: Almonds, apricots, grapes, olives, peaches, pears, plums, prunes, walnuts.

2. Sierra Mountain: Apples, grapes, peaches, pears, plums.

3. North Coast: Apples, grapes, pears, prunes, walnuts.

4. Central Coast: Almonds, apples, apricots, cherries, grapes, pears, plums, prunes, walnuts.

5. San Joaquin Valley: Almonds, apricots, cherries, figs, grapes, lemons, nectarines, olives, oranges, peaches, persimmons, pistachios, plums, pomegranates, prunes, walnuts.

6. Southern California: Almonds, apples, apricots, avocados, dates, grapes, grapefruit, lemons, oranges, olives, walnuts.

CALIFORNIA FRUIT AND NUT STATISTICS

This bulletin contains preliminary estimates for 1983 and final 1982 California fruit and nut statistics. Final revisions for 1982 have been made based on review of marketing order data, recorded truck and rail movement, quantities used by processors, and other available check data. Estimates of production and prices for 1983 are preliminary and subject to revision after final data are received.

Utilization and price data are shown in one table for ease of reading.

Explanatory "Notes for the Users" on page 1 provide general information regarding the data shown and covers special or unique factors pertaining to individual crop data.

Data presented in this publication are made possible by the voluntary cooperation of growers, fresh shippers, processors, and other representatives of the California fruit and nut industry. Their cooperation is greatly appreciated.

NOTES FOR USERS

1. PRODUCTION

Total production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested, primarily for economic reasons.

Utilized production is the amount sold plus the quantities used at home. This production was formerly called production of value.

Economic abandonment is the difference between total and utilized production. This is the quantity of fruit not harvested for economic reasons or cullage of harvested fruit.

2. UTILIZATION

Utilization refers to first, not necessarily final, utilization. For example: frozen fruit used for preserves is included as frozen.

Canned: Includes all canned products -- jam, jelly, baby food, nectar, juice, puree, and all fruit packs combined.

Dried: Tonnage published is the equivalent fresh tonnage weight for most fruits. Data acquired from dry yards and dehydrators provide the dried tonnage and the estimated drying ratio. The equivalent green tonnage used for drying is derived. The following table lists the tons of green fruit required to produce one dried ton.

Year	Apples	Apricots	Figs	Raisins	Freestone Peaches	Pears	Prunes
1982	8.5	6.88	3.0	5.24	8.7	6.0	3.2
1983	N/A	6.88	3.0	4.48	9.0	6.0	3.2

3. PRICE AND VALUE

a. Noncitrus Fruits and Nuts

Average grower return: The entire data series is based on the equivalent return at the first delivery point. The first delivery point price is defined as the price received by growers for fruit delivered at the local market, packinghouse, receiving station, or any other first delivery point.

Price and value: Prices are season averages computed on the basis of all methods of sale. Returns at the processing plant door for "processing" utilization and returns at the packinghouse door for "fresh market" utilization are weighted together to obtain the season average. Value estimates in this report cover the marketing season or crop year or years and should not be confused with cash receipts from these crops for a single calendar year. The season average price is applied to utilized production to compute value of production.

b. Citrus Fruits

Price and value, published as "grower return per box", are based on equivalent packinghouse door returns for the entire data series.

CITRUS AND AVOCADO CROP YEAR

Production for the crop year is from the bloom of the first year shown.

1983: VALUE DOWN, GRAPES REMAIN LEADER

The total value of California's 1983 fruit and nut crops is estimated to be $2.63 billion, a 14 percent decrease from the 1982 crop. Grapes accounted for about 36 percent of this estimate with $959 million in total value.

California's total fruit and nut production is estimated at 11,202,600 tons, down 3.2 percent from the 1982 total. (The fresh weight equivalent of dried prunes is included for 1980 to present, therefore, all dried fruits are now represented by their fresh weight equivalent.) Total bearing acreage is the largest on record at 1,849,559 acres. The average per acre value is $1,423, down $263 from a year ago.

Excess winter rains caused undue stress on deciduous fruit and nut orchards resulting in many trees being pulled. Early spring rain presented poor pollination conditions for deciduous fruit and nut crops adding further stress and resulting in less production. Clingstone peaches were adversely affected by brown rot during the summer causing a lot of fruit to rot on the trees and resulting in production being the lowest since the 1920's. Record high bearing acres, production, and value were reached on pomegranates, while almonds, avocados, and plums set records on bearing acres.

TABLE 1 -- FRUIT AND NUT CROPS: Acreage, production, and value, California, 1974-83

Crop Year	Bearing Acreage	Total Production	Average Value Per Acre a/ b/	Average Value Per Acre a/ c/	Total Utilized Value a/ b/	Total Utilized Value a/ c/
	Acres	Tons	Dollars	Dollars	$1,000	$1,000
1974	1,505,540	8,607,650	966	987	1,454,947	1,485,888
1975	1,580,930	9,721,650	942	958	1,488,790	1,514,402
1976	1,639,625	9,626,600	962	979	1,577,446	1,604,645
1977	1,703,020	9,596,250	1,137	1,157	1,936,510	1,970,858
1978	1,730,320	9,182,600	1,332	1,351	2,304,941	2,337,140
1979	1,765,912	9,662,370	1,664	1,681	2,938,151	2,968,657
1980	1,768,650	11,720,440 d/	1,745	1,765	3,086,340	3,120,836
1981	1,763,340	11,001,550 d/	1,638	1,656	2,888,925	2,919,444
1982	1,813,022	11,573,900 d/	1,680	1,686	3,046,264	3,056,235
1983	1,849,559	11,202,600 d/	1,413	1,423	2,613,849	2,631,744

a/ Price and value estimates for citrus fruit are based on equivalent packinghouse door returns.
b/ Price and value estimates based entirely on returns at first delivery point for processing or dual fresh market processing noncitrus fruit.
c/ Price and value estimates for noncitrus fruit and nuts are based on equivalent returns at the processing plant door for "processing" utilization and returns at first delivery point for "fresh market" utilization.
d/ Dried fruits are represented by their fresh weight equivalents.

TABLE 2 -- CALIFORNIA ALL FRUITS AND NUTS: Total acreage, production, and value, by groups, 1982-83

Crop	Year	Bearing Acres	Production Short Tons	Value of Production $1,000
Deciduous Tree Fruits a/	1982 1983	271,751 269,045	2,167,600 1,953,200	498,934 466,429 f/
All Grapes b/	1982 1983	619,976 649,600	6,076,000 4,695,000	1,246,827 958,558
Tree Nuts c/	1982 1983	540,540 557,000	429,200 320,700	612,888 479,028 f/
Semitropical Tree Fruits d/	1982 1983	116,402 118,828	365,100 305,700	211,244 138,381
Citrus Fruits e/	1982 1983	264,353 255,086	2,536,000 3,928,000	486,342 589,348
Total	1982 1983	1,813,022 1,849,559	11,573,900 11,202,600	3,056,235 2,631,744

a/ Includes apples, apricots, cherries, kiwifruit, nectarines, peaches, pears, plums, pomegranates, and prunes.
b/ Includes raisin, table, and wine varieties. Value for all grapes 1983 crop based on 1983 prices for wine type grapes and projected total value for table and raisin type grapes.
c/ Includes almonds, pistachios, and walnuts. Includes almonds on a meat basis and pistachios and walnuts on an in-shell basis.
d/ Includes avocados, dates, figs, and olives.
e/ Includes grapefruit, lemons, oranges, tangerines, tangelos, and tangors. Tons are converted by multiplying production boxes by weights shown below California citrus fruits table on page 7.
f/ Value for kiwifruit, prunes, and walnuts was computed using 1982 prices.

a/ Price of fruit only and does not include drying costs. Dried price derived from fresh price using drying ratio.
b/ Processed fruit included in fresh market total to avoid disclosure of individual operations.
c/ Included in total processed to prevent disclosure.
d/ Canned figs included in fresh to avoid disclosure.
e/ Includes value of the dried fruit and drying costs.
f/ Chopped, brined, minced, and other cures included in canned.
g/ Small amount of pickled and crushed included in canned.
h/ Utilization not published to prevent disclosure.
i/ Included in canned.

CALIFORNIA
CROP AND LIVESTOCK
REPORTING SERVICE

CALIFORNIA LIVESTOCK STATISTICS

1983

FOREWORD

Ranchers, farmers, and businessmen need reliable and accurate statistical data as a basis for planning their operations. The information contained in this bulletin is published to assist people in the livestock industry in planning and making operational decisions.

Contained in this bulletin is a compilation of official estimates of livestock inventory numbers, production, income and related statistical information for cattle and calves, sheep and lambs, and hogs. The data represented are for the years 1974 through 1983. The 1974 through 1982 figures are revised estimates while the 1983 figures are generally preliminary. The data in this bulletin supercedes any previous issues.

The preparation and release of estimates is a primary function of the California Crop and Livestock Reporting Service. This agency is the California office of the Statistical Reporting Service of the United States Department of Agriculture. Under a cooperative agreement, this agency also serves as the Bureau of Agricultural Statistics of the California Department of Food and Agriculture. As part of a federal agency, its functions are correlated with the national programs to provide uniform statistics of agriculture for the nation. As a state service, this office develops additional statistical information to fulfill local needs, generally in the form of county estimates.

The voluntary cooperation of ranchers, farmers, and agri-businessmen is the primary data source of the California Crop and Livestock Reporting Service. We appreciate the faithful service and cooperation and extend our sincere thanks. The statisticians responsible for much of the data published in this bulletin are Neil Gum, Peggy Stringer and Vic Tolomeo.

R. A. McGREGOR
Agricultural Statistician in Charge

GEORGE N. TUCKER, JR.
Agricultural Statistician, Livestock

June 1984

TABLE OF CONTENTS

TABLE PAGE

1. LIVESTOCK: Production and income, California, 1974-83 ... 1
2. LIVESTOCK: Number on farms and ranches, January 1, California averages, 1920-79 and annual 1978-84, (U.S. - 1984) ... 2
3. INCOME: Cash receipts from farm marketings of livestock and poultry commodities, California, 1974-83 ... 2
4. PRICES: Average annual prices received by farmers for livestock and livestock products, California, 1974-83 ... 3
5. RANGE: Reported condition in percent, California, 1974-83 ... 3
6. CATTLE AND CALVES: Inventory, supply, and disposition, California, 1974-83 (U.S. - 1983) ... 4
7. CATTLE AND CALVES: Number on farms, by classes, California, January 1, 1974-84 (U.S. - 1984) ... 5
8. CATTLE AND CALVES: Calf crop and death losses, California, 1974-83, (U.S. - 1983) ... 5
9. CATTLE AND CALVES: Number slaughtered under Federal and State inspection, by months, California, 1974-83, (U.S. - 1983) ... 5

CATTLE POPULATION MAP: January 1, 1984 ... 6

10. CATTLE AND CALVES: Number of head on farms, by county and type, California, 1983-84 ... 7
11. CATTLE AND CALVES: Number in feedlots, by districts, by months, California, 1983-84 ... 8
12. CATTLE AND CALVES: Number marketed from feedlots, by quarters, California, 1974-84 ... 8
13. CATTLE AND CALVES: Number shipped into California, by state of origin, 1982-83 ... 9
14. CATTLE AND CALVES: Number shipped into California, by months, 1974-83 ... 9
15. CATTLE AND CALVES: Number shipped out of California, by months, 1974-83 ... 9
16. CATTLE AND CALVES: Percent of operations and inventory by size groups, 1981-82, selected states ... 10
17. MILK COWS: Percent of operations and inventory by size groups, 1981-82, selected states ... 10
18. FARMS: Number of farms, by classification, California, 1974-83, (U.S. - 1983) ... 10
19. MILK COWS AND MILK PRODUCTION: Milk cows on farms, production per cow, and total milk production, California, 1974-84, (U.S. - 1983) ... 11
20. MILK COWS: Number shipped into California, by state of origin, 1982-83 ... 11
21. CATTLE AND CALVES: Beef cattle, monthly and annual average prices received by farmers, California, 1969-83 ... 12
22. CATTLE AND CALVES: Steers and heifers, monthly and annual average prices received by farmers, California, 1969-83 ... 12

1/ Balance sheet estimates: the sum of inventory at beginning of year (January 1), births, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and end-of-year inventory.

2/ Includes custom slaughter for use on farms where produced, but excludes interfarm sales within the State.

3/ Excludes custom slaughter for farms at commercial establishments.

1/ An operation is any place having one or more head of the species on hand at any time during the year.
2/ Old definition of farm: Places of 10 or more acres that had annual sales of agricultural products of $50 or more and places of less than 10 acres that had sales of $250 or more.
3/ New definition of farm: Places with annual sales of agricultural products of $1,000 or more.
4/ Includes milk cow operations.

U.S. - 1983	12,026	8,154	1,783	1,773	6,984	173	682	942	11,411

1/ Balance sheet estimates: the sum of inventory at beginning of year (January 1), lamb crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and end-of-year inventory.

2/ Includes custom slaughter for use on farms where produced, but excludes interfarm sales within the state.

3/ Excludes custom slaughter for farms at commercial establishments.

U.S. - 1983	53,935	46,765	45,479	3,522	88,423	500	4,958	55,819

1/ Balance sheet estimates: the sum of inventory at beginning of year (December 1) pig crop, and inshipments is equal to the sum of marketings, farm slaughter, deaths, and end-of-year inventory.

2/ Includes custom slaughter for use on farms where produced, but excludes interfarm sales within the State.

3/ Excludes custom slaughter for farms at commercial establishments.

CALIFORNIA AGRICULTURE

(Statistical Review for 1983)

California continued in 1983 to lead the Nation in cash farm receipts. An estimated $13.5 billion was paid to the State's farmers and ranchers in 1983 for 46.8 million tons of farm crops plus livestock and livestock products. These receipts represent a 6 percent decline from 1982 when cash farm receipts totaled $14.4 billion. Record high cash receipts for vegetables were more than offset by declines in fruits and nuts, field crops and livestock.

The 1983 crop production was down 10 percent from 1982 chiefly due to field crop acreage being idled as part of the USDA Payment-In-Kind (PIK) program. Field crop production fell to 22.2 million tons, 16 percent below a year earlier. Cash receipts for commodities received in payment for program participation may not be realized until 1984. Prices for most field crops were stronger in 1983 than in 1982.

Crop production from fruits, nuts, vegetables, and melons declined 3 percent in 1983. Fruit prices were generally lower while vegetable prices strengthened from the previous year.

Cash receipts from all livestock, poultry, and apiary marketings declined 5 percent in 1983. Sales and production were down for most livestock items and prices tended to be lower with the exception of higher prices for calves, lambs, and eggs.

FIELD CROPS: California's 1983 field crop production was 22,230,000 tons. This is 16 percent below last year's 26,386,000 tons and 27 percent below the record high 30,481,000 tons produced in 1981. Sugar beet and hay (other than alfalfa) production were above last year. Increases in these crops were more than offset by production declines in all other field crops estimated. Average value per acre of production increased to $537. This is 9 percent above the $493 per acre value of 1982 production and 9 percent below the record high $593 in 1980. More than 1.5 million acres of California field cropland were idled in 1983, a result of USDA's Payment-In-Kind (PIK) and acreage reduction programs.

FRUIT AND NUT CROPS: The total value of California's 1983 fruit and nut crops is estimated to be $2.63 billion, a 14 percent decrease from the 1982 crop. Grapes accounted for about 36 percent of this estimate with $959 million in total value.

California's total fruit and nut production is estimated at 11,202,600 tons, down 3.2 percent from 1982. (All dried fruits are now represented by their fresh weight equivalent.) Total bearing acreage is the largest on record at 1,849,559 acres. The average per acre value is $1,423, down $263 from a year ago.

Excess winter rains caused undue stress on deciduous fruit and nut orchards resulting in many trees being pulled. Early spring rains presented poor pollination conditions for deciduous fruit and nut crops adding further stress and resulting in less production. Clingstone peaches were adversely affected by brown rot during the summer causing fruit to rot on the trees and resulting in production being the lowest since the 1920's. Record high bearing acres, production, and value were reached on pomegranates, while almonds, avocados, and plums set records on bearing acres.

VEGETABLE CROPS: California's vegetable crops for 1983 showed a record value of $2.9 million, up 2.3 percent from 1982. Production, at 13.3 million tons, is about 3 percent below last year and the third highest tonnage on record. Harvested acreage for 1983, at about 942 thousand acres, is just slightly above last year and a new record.

Commodities showing the greatest increase in value from 1982 were lettuce, celery, mushrooms, cauliflower, and carrots. These gains were partially offset by decreases in value for processing tomatoes, strawberries, broccoli, and dry onions. New record highs for major crops were posted in 1983 for values of carrots, cauliflower, celery, and lettuce.

Production of cauliflower, sweet corn, and honeydews showed a considerable increase from last year with the cauliflower and honeydew crops setting production records. Most other crops showed production near or below 1982.

Season average prices for 1983 averaged slightly higher than in 1982 with celery and mushrooms showing large increases. Average value of production per acre was $3,084 compared to $3,021 per acre in 1982.

LIVESTOCK AND DAIRY: Cattle and calves totaled 5.0 million head on California farms and ranches January 1, 1984. Beef producers trimmed their inventory for the second year. Dairy cow numbers expanded again to a record high level and producers maintained a near record inventory of dairy replacement heifers.

Sheep and lamb numbers remained at the same level as a year earlier. The stock sheep inventory was reduced while the number on feed for the slaughter market increased.

The December 1, 1983 inventory of hogs and pigs showed a small decrease. Cash receipts from farm marketings of meat animals during 1983 were $1.338 million, while 1983 receipts from sales of milk and cream totaled $1.948 million.

POULTRY: California egg production totaled 8.173 billion eggs during 1983 for a second yearly decline of slightly more than 1 percent. Broiler and fryer chicken production totaled 172 million birds in 1983; a 2.5 percent increase for the year. California turkey production, at 20.2 million birds, was just slightly more than during 1982. Cash receipts from farm marketings of chicken eggs in 1983 were $372 million, broilers $253 million, and turkeys $146 million.

CALIFORNIA FIRSTS

Some 200 crops are recognized in California, including seeds, flowers, and ornamentals. This report contains information for 58 major crops grown on a large commercial scale in California -- 13 field crops, 22 fruits and nuts, and 23 vegetables. In addition, data are shown for 9 livestock and poultry products.

The table below lists 48 commercial crop and livestock commodities in which California leads the Nation. A large number are specialty crops in which the Golden State accounts for most of the U. S. production.

CROP AND LIVESTOCK COMMODITIES IN WHICH CALIFORNIA LEADS THE NATION

Alfalfa Seed
Almonds
Apricots
Artichokes
Asparagus
Avocados
Broccoli
Brussels Sprouts
Cantaloups
Carrots
Casaba Melons
Cauliflower

Celery
Crenshaw Melons
Cut Flowers
Dates
Eggs
Figs
Garlic
Green Lima Beans
Grapes
Honeydew Melons
Jojoba
Kiwifruit

Ladino Clover Seed
Lemons
Lettuce
Mushrooms, Fresh Market
Nectarines
Nursery Products
Olives
Onions
Oriental Vegetables
Peaches
Pears, Bartlett
Persian Melons

Persimmons
Pistachios
Plums
Pomegranates
Potted Plants
Prunes
Rabbits
Safflower
Spinach
Strawberries
Tomatoes, Processing
Walnuts

a/ Based on quantity produced for crops and on quantity marketed for livestock and poultry products.
b/ Based on value of quantity harvested for crops and on value of quantity marketed for livestock and poultry products.
c/ Share of U.S. production based on 1978 Census of Agriculture.
d/ Extracted from Agricultural Commissioners' Annual Crop Reports.
e/ Includes cut flowers, potted plants, foliage plants, bedding plants, and indoor decoratives.
f/ Includes trees, shrubs, vines, bulbs, turf, and cut Christmas trees, etc., not included in flowers and foliage category.
g/ Millions of eggs.
h/ Not Available.
i/ The 1983 price and value are based on U.S. average price.
j/ Value of production based on 1982 price.
k/ Miscellaneous vegetables cover a number of other vegetable crops not published separately. Some of the crops included in this group are green onions, Oriental vegetables, parsley, pumpkins, radishes, squash, etc.

STATE COMMODITY RANKING: California's "Top Twenty" crop and livestock commodities account for about 78 percent of the State's gross farm income. In 1983, dairy products, cattle and calves, and eggs continued to dominate the livestock industry, while grapes, cotton, hay, nursery products, lettuce, and flowers and foliage were the most important crops.

California agriculture is considered one of the most diversified in the world, with no one crop dominating the State's farm economy. This is illustrated by the fact that most crops individually account for less than 2 percent of the State's total gross farm income. California leads the Nation by a wide margin in the production of fruits and nuts and vegetables. California accounts for 50 percent of the Nation's cash receipts for fruits and nuts, while for vegetables, its share is about 49 percent.

Ranking and Value, 20 Leading Farm Products, California, 1982-83

a/ Based on value of quantity harvested for crops and on value of quantity marketed for livestock and poultry products.

PRINCIPAL GROUPINGS: The combined acreage of principal crops in 1983 totaled 7.85 million acres, 15 percent below the acres harvested in 1982. Gains occurred in fruit and nut crops (2 percent), and a light gain in vegetable crops, while field crops decreased (22 percent). California's harvested farm production in 1983 was 46.8 million tons, off 10 percent from 1982's 51.7 million tons.

Acreage and Production by Principal Groupings for California, 1981-83

		Field Crops	Fruit and Nut Crops	Vegetables and Melons	Total
		- - - - - - - - - - Acres	- - - - - - - - - -		
Acreage Harvested	1981	7,077,000	1,763,340	870,360	9,710,700

	1983	5,062,000	1,849,559	941,746	7,853,305
		- - - - - - - - - Short Tons	- - - - - - - - -		
Production	1981	30,481,000	11,001,550	12,021,250	53,503,800
	1982	26,386,000	11,573,900	13,750,850	51,710,750
	1983	22,230,000	11,202,600	13,346,550	46,779,150

NUMBER OF FARMS AND INVESTMENTS: California, which is the second largest state in the conterminous United States with a land area of 100.2 million acres, had an estimated 33.7 million acres in farms in 1983. California farmers produced about 10 percent of the national gross cash receipts from farming in 1983. This production was realized from 78,000 farms, or 3 percent of the Nation's total (based on the definition of places with annual sales of agricultural products of $1,000 or more.)

The average California farm was estimated at 432 acres in 1983, valued at $831,700 including buildings. Nationally, the average farm size in 1983 was 437 acres and valued at $325,061 including buildings.

LAND VALUES: The State average value per acre as of April 1, 1984 was $1,925, the same as 1983. This compared with the average U.S. value of $739 in 1984 and $743 in 1983. The following table summarizes average market values per acre for specified use of California farmlands by major districts.

AVERAGE VALUE OF LAND PER ACRE BY DISTRICT, CALIFORNIA -- April 1, 1983-84

a/ Old definition of farm: Places of 10 or more acres that had annual sales of agricultural products of $50 or more and places of less than 10 acres that has annual sales of $250 or more.

b/ New definition of farm: Places with annual sales of agricultural products of $1,000 or more.

c/ Preliminary.

EXPORTS

California's 1983 agricultural sales into international trade declined 8 percent from 1982. Slightly over three billion dollars is the estimated value of the State's farm and ranch products being sold abroad during calendar year 1983, a decline of about one-quarter billion dollars. Even though almonds, rice, and oranges recovered from the previous year's decline and showed increases of + 3 percent, + 36 percent, and + 25 percent respectively, other leading products, including cotton, wheat, grapes, and walnuts, declined.

This decline is a result of the strength of the U.S. dollar abroad that is making our exports more expensive for foreign buyers and increasing the ability of competing producers to undersell us.

Markets for California's products are now two-thirds in Asia and 10 percent to Canada so economic factors in these two areas are important determinants of future sales of California's agricultural products.

Cotton continues as California's leading agricultural exported product with three out of every four bales produced in 1983 being sold abroad. Almonds have returned to number two rank after being displaced for two years. Oranges regained their importance to rise to the number three position, followed by grapes (including fresh, dried, and crushed) and rice.

ESTIMATED VALUE OF CALIFORNIA'S LEADING AGRICULTURAL EXPORTS
VALUED AT PORT OF EXPORTATION, CALENDAR YEAR, 1983

DATA INCLUSIONS AND LIMITATIONS: Data sources often differ in what is included or excluded. The following are guidelines for the data used in this report. The fact that various export studies report different numbers is often explained by whether or not it includes or excludes some of the following items or trade patterns.

1. Shipments between the 50 states, Puerto Rico, and U.S. island possessions (Virgin islands, Guam, etc.) are excluded from the data on which this report is based.

2. Shipments in transit from one country to another through the U.S. are excluded.

3. Shipments to U.S. Armed Forces and Diplomatic Missions abroad for their own use are excluded.

4. Shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act) and P.L. 87-195 (Act for International Development) are included.

5. Agricultural commodities covered in this report consist of nonmarine food products and agricultural products that have not passed through complex manufacturing processes. Raw hides and skins, vegetable and animal fats and oils, and unrefined wines are included. Such manufactured items as textiles, leather, boots and shoes, baked goods, and distilled alcoholic beverages are not included.

6. Both the California Crop and Livestock Reporting Service and the U.S. Department of Commerce are constantly updating and revising data. The most recent available revision was used at the time of the assembly of this report, April-June 1984.

INFORMATION SOURCES: The following is a list of major sources used in this report.

U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division data series EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation, available on magnetic computer tape.

U.S. Department of Agriculture, Agricultural Statistics, 1983.

U.S. Department of Agriculture, Economic Research Service, Foreign Agricultural Trade of the United States, 1983.

Statistics Canada. Import data from customs records obtained on special order tape.

Agriculture Cananda. Annual Unload Report -- Fresh Fruits and Vegetables on 12 Canadian Markets.

U.S. Department of Agriculture publications: Foreign Agriculture, Foreign Agriculture Circulars Outlook for U.S. Agricultural Exports, Agricultural Outlook, and periodic releases of the Crop Reporting Board.

Federal/State Market News Service Publications. Frequent market reports sometimes include exported commodities.

Marketing Organizations and Individuals. Many people supplied opinions and information about the commodities with which they are professionally involved. We wish to thank all those who contributed their expertise.

INTRODUCTION: This 1983 estimate of California's agricultural exports is being published in two sections: (1) the Annual Bulletin and (2) a Statistical Appendix. This makes Table 1-5 of the export report available separately from the Statistical Appendix that contains tables of commodity shipments by country of destination and tables showing all agricultural commodities shipped to selected countries.

Using a calendar year basis complicates comparisons of exports to crop data with varying crop or marketing year cut-off dates. Where crops are harvested late in the year and marketed throughout the following year (e.g. cotton, almonds), the comparisons shown are with the production of the preceding year. Please note footnotes to Table 3 to ascertain whether this delayed comparison system has been used.

The comparisons of both California and U.S. crop values to exports in Table 3 are calculated using average farm level prices at the state and national level. Since exported produce is often of higher than average quality and may represent off-season high value produce in some categories, the use of average prices probably underestimates the value of the exported portion of the crop.

Farm values and quantities used to compare exports to the total crop were taken from existing publications of the California Crop and Livestock Reporting Service and the U.S. Department of Agriculture's Statistical Reporting Service published material. Conversion of commodities from export form to farm production units was done using Statistical Bulletin No. 616, Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products. Table 5 comparisons between California and U.S. total exports are done solely on export values.

The Statistical Appendix containing Tables 6 and 7 is published separately from the current bulletin. In the commodity by country tables, both U.S. and California port data are shown for most agricultural commodities that appear in Table 5. In Table 7, selected U.S. agricultural exports, the portion moving through California port districts, and a separation between sea and air shipments are shown by country. The 25 leading markets for U.S. agricultural products are included.

The final estimates of California's agricultural exports in this bulletin were made using the port data, information from the Canadian government on unloads of fresh fruits and vegetables, and by contacting representatives of commodity groups, exporters, and handlers to obtain their opinions. Each commodity was treated separately and the estimate was made on the best available information. It should be emphasized that these are estimates since exact data are not available.

R. A. McGregor
Agricultural Statistician in Charge

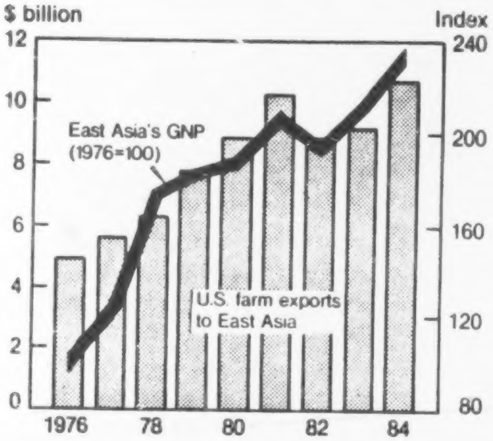
HIGHLIGHTS OF CALIFORNIA'S AGRICULTURAL EXPORTS
CALENDAR YEAR 1983

TABLE 1

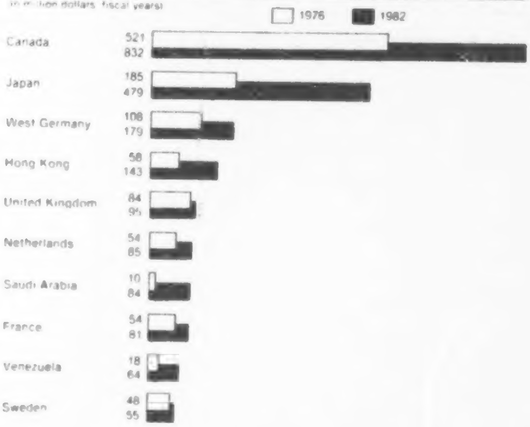
California's 1983 agricultural exports declined 8 percent from 1982. Just over three billion dollars is the estimated value of the State's farm and ranch products being sold abroad during calendar year 1983, a decline of about one-quarter billion dollars. Even though almonds, rice, and citrus products recovered from the previous year's decline and showed an increase from 1982 to 1983, other leading products including cotton, wheat, grapes, and walnuts declined.

This decline is a result of the strength of the U.S. dollar that is making our exports more expensive for foreign buyers and increasing the ability of competing producers to undersell us. This point is illustrated by a statement from the Director General for Agriculture with the European Common Market, Mr. Claude Villain, speaking in Fresno: "the dollar has increased 60 percent against the composite 'European Currency Unit', and 100 percent against the French franc and the Italian lira since 1982".

Economic growth drives U.S. farm exports



Canada Is Leading Market for U.S. Horticultural Exports



With two-thirds of our exports being sold in Asia and another 10 percent to Canada, it is clear that economic factors affecting these areas will determine California's future sales of agricultural products. The accompanying chart provides considerable hope for expanding sales in East Asia (Japan, Korea, Hong Kong, and Taiwan) along with the expanding Gross National Product of the area. Exports to Canada should increase following the economic recovery of 1983-84. Fresh fruits and vegetables from California are a big part of the 1.1 billion dollar value of horticultural products that Canada imported from the U.S. during 1983.

Canada's leadership as a market for U.S. horticultural products is illustrated by the accompanying figure. California's products including fresh produce, canned fruits and vegetables, dried fruits, nuts, juices, and wines make up a large part of this trade. Specialized markets have been developed for fresh wine grapes for home wine making and pressed grape juice that is used by commercial winemakers.

California's future agricultural exports are encouraged by: (1) Containerization of ocean freight as illustrated on our cover, (2) Emphasis on exporting high value and value added agricultural products by USDA's Foreign Agricultural Service, and (3) New state government programs which include the California State World Trade Commission, the publication of an Agricultural Export Directory, and holding a series of four seminars for exporters of agricultural products.

CALIFORNIA'S AGRICULTURAL EXPORT PROFILE, 1983

TABLE 2

International trade's importance to California's ranchers and growers continues even with a decline in the value of our exports. Table 2 shows three measures of this importance:

(1) The farm level value of exports as a percentage of the value of production - a measure that ranges from 76 percent of cotton lint to less than 2 percent for olives and processing tomatoes.

(2) California's portion of U.S. agricultural exports - in 14 crops we provide 95-100 percent of the U.S. exports and we produce 8.6 percent of all U.S. agricultural exports.

(3) The acreage needed to grow produce for export - over 2.8 million acres that represent 32 percent of California's cropland harvested in 1983. This estimate is based on state average yields.

Leading our exports are:

Cotton - Not only our most valuable export, but with three out of four bales going abroad, it is primarily dependent on sales to such apparel makers as Japan, South Korea, Hong Kong, Singapore, and Taiwan. Of the medium to long staple cotton exported by the U.S., California provides just over half (50.5 percent). More than one million acres are used to produce this number one export product.

Almonds - Returning to the number two rank after being displaced for two years, almonds are California's and the Nation's leading horticultural export. Commercially grown exclusively in the Golden State, the market abroad has been developed to purchase more than half the crop and this requires an estimated 171,500 acres calculated at 1982 average yields due to the lag between harvest and sale. Because of the calendar year approach to exports, this estimate varies from the almond industry's marketing year data.

Oranges - Also regaining some of their former prominence, oranges from an estimated 40,000 acres were shipped abroad in 1983. California dominates the fresh orange market with high quality Navels during the winter and Valencias throughout the summer. When orange juice and oil are included, 68.2 percent of the U.S. orange exports originated in California and our orange growers counted on international markets for selling one-fourth (24.7 percent) of their crop.

Grapes - Declines in all categories (fresh, dried, and crushed) were registered in exports of the products of California's vineyards. Raisin values were depressed by increasing competition in the European market from cheaper, government-subsidized Greek raisins. The strong dollar also increased the prices of our table grapes and wines, making competition with Mediterranean products (French, Italian, Portuguese, and Greek) more difficult throughout the world markets.

Rice - Slowly regaining its overseas markets in 1983, the rice industry in California exported four bags out of ten grown in 1982 (41.8 percent). This is over half of the U.S. exports (55.7 percent) and required nearly a quarter-million acres (223,746) when calculated at average yields.

TABLE 3. CALIFORNIA'S PRINCIPAL CROP AND LIVESTOCK COMMODITIES ESTIMATED FARM VALUE OF PRODUCTION AND COMPARABLE FARM VALUE OF EXPORTS WITH COMPARISON TO U.S. TOTAL, 1983

N/A Not available.

COMPARISON OF CALIFORNIA'S AGRICULTURAL PRODUCTION WITH ESTIMATED EXPORTS

TABLE 3

The farmgate value of exports is shown in Table 3 and compared to total state production as estimated by the California Crop and Livestock Reporting Service or the Summary of California County Agricultural Commissioners' Reports. This farmgate value comparison is made using quantities exported valued at state average prices and varies significantly from the value declared at the port of embarcation used in Table 1. In some products, the high quality selection process and special packing required for overseas markets augments the value considerably. A comparison of California to U.S. exports is computed on the same basis: valuing exported quantities at national average farmgate prices.

Calendar year export data does not coincide with the varying harvest periods and marketing years of California's diverse production. In noted cases, the comparison of exports to production is made with the previous calendar year's crop since considerable delay is encountered in shipping products harvested late in the year.

FIELD CROPS

Cotton remains the major agricultural product exported from California's farms and ranches with three-fourths being sold abroad. Both production and exports declined and the strong dollar, increased competition, and Mainland China's curtailed purchases were instrumental in this downward trend.

While 1983 rice exports increased, California wheat sales abroad decreased. Alfalfa hay in cube form and alfalfa seed together made a 50 percent increase in value exported from 1982 to 1983, the largest percentage gain among the separately estimated commodities.

FRUIT AND NUT CROPS

Almonds returned to the number two place in California's agricultural exports during 1983 and oranges moved into the third rank, emphasizing the ability of these two California specialties to maintain markets abroad. Both also reflect a continued demand that has been carefully fostered over prolonged periods by large cooperative organizations. Grapes, walnuts, and peaches have declined in value exported following the general trend. Lemons, avocados, and strawberries gained in export value between 1982 and 1983 while pears, plums, and dates declined. Pistachios have been added since a separate category in the export data has been created for them.

VEGETABLES, FLOWERS, AND BERRIES

Although tomatoes, onions, and lettuce declined in value exported, they remain the leading vegetables going into international trade. Asparagus and potatoes also declined, but broccoli and celery gained. Cauliflower has been added to the list of separate crop estimates this year since it has risen to nearly equal broccoli, both of which are popular among Canadian consumers.

LIVESTOCK AND POULTRY

Estimating the quantity and values of livestock products being exported and comparing this to a farm value is complicated by the variety of products reported - hides, tallow, offal, meats, and live animals, for example. Also, the valuations assigned to dairy products donated to foreign nutrition programs from U.S. government stockpiles do not reflect their market value.

Exports of poultry and poultry products declined again with the largest drop being recorded in the exports of eggs and egg products. Increasing competition in the Far East from Mainland China and the failure to sell in the Middle Eastern markets due to the stronger dollar and increased competition from European sources are among the factors contributing to this decline.

CHANGES OVER FIVE YEARS

TABLE 4

Changes in value of California's exports of selected leading commodities and the total exports over the five-year period 1979-1983 are shown in Table 4. The total change for the five years is a 9 percent gain, even though the last two years have shown declines overall. A wide variation exists between commodities: strawberries and oranges have more than doubled while wheat and cottonseed have declined 66 percent and 49 percent, respectively. The peak for most commodities was in 1981. No adjustments have been made in these values for inflation.

TABLE 4. VALUE OF EXPORTED COMMODITIES PRODUCED IN CALIFORNIA, 1979-83

CALIFORNIA'S SHARE OF THE NATION'S AGRICULTURAL EXPORTS

TABLE 5

California's estimated agricultural exports for calendar year 1983 are presented in Table 5 on an individual item basis. U.S. total agricultural exports of each item are also shown, and the share of the Nation's exports produced in California is calculated using this data. The results are not always in agreement with the USDA production share approach to estimating each state's portion of U.S. exports. The total in Table 5 is a 24 percent increase over the California total calculated using the production share approach.

The estimated values in Table 5 are based on port declarations and include freight, insurance, and port charges. These values are notably different from the farmgate values shown in Table 3.

Using these port values, California exports about one in every twelve dollars of total U.S. agricultural exports. While California produces about half of the nation's total fruits, nuts, and vegetables, 77 percent of the exports of these commodities come from the Golden State. The total U.S. export value is heavily weighted with commodities such as soybeans, and tobacco that are not produced in California. Among the state's crops, there are 28 where more than half of the exported portion comes from California. Of these, eleven are 100 percent from California including almonds, apricots, dates, figs, olives, pistachios, prunes, walnuts, garlic, cauliflower, and Ladino clover seed.

To arrive at the estimates in Table 5, each selected commodity was individually studied. For some that are grown only in California, the national export data are immediately applicable. For others that are produced in states outside California, modifications are made using California port data and opinions and information from commodity traders and exporters. Additional information on shipments of fruits and vegetables to Canada was obtained from the Canadian government.

Only when California grown products are not easily identifiable (hides and skins, tallow, meats, and poultry, for example) is the California share of U.S. production used in estimating the portion of U.S. exports produced in California. This system is also used to calculate the "all other" category using factors obtained from the Economic Research Service of the U.S. Department of Agriculture. The factors were calculated for 15 groups of commodities not listed separately in Table 5 and applied to the U.S. totals that are shown in Table 8 of the Statistical Appendix to this bulletin.

In the graph at the right, the relationship between farm prices and exports is illustrated at the national level. California shares in this decline in proportion to its share of U.S. exports as shown in Table 5. The strong dollar and increased competition are reducing the incomes of California's ranchers and growers.

INTRODUCTION: The publication Exports of Agricultural Commodities Produced in California is published in two parts: an Annual Bulletin and a Statistical Appendix. The Annual Bulletin provides a review of data and information sources, the value and quantity for California's major agricultural export items with year-to-year comparisons, farm value, acreage required to produce selected agricultural exports, and comparisons of California exports to those of the nation. The Statistical Appendix provides detail on value and quantity of exports of agricultural goods that are of interest to California. Detail on commodity movement to specific markets is provided by country with commodity detail, and by commodity with individual country detail. Statistics on the method of shipment, either air or vessel, are also presented within the country detail tables.

Table 6 provides commodity information by destination, with total U.S. exports and movement of the goods through the California port districts. Over 150 agricultural products are presented. Port district statistics reflect total shipments of the item through the port district, without consideration of the point of origin of the commodity. Therefore, individual users of this data must apply their own knowledge of trade patterns to determine the portion of a specific product that originates on California farms and ranches. Products moving to Canada from California are rarely reflected in the California port district statistics. Additional information on trade with Canada is available from the Federal-State Market News Service and Agriculture Canada, referenced in the Annual Bulletin.

Table 7 shows exports to 25 countries based on the total value of U.S. exports in over 400 separate agricultural commodities. Commodities are presented in numeric order based on the Bureau of Census Schedule B Classification. Statistics include total quantity and value exported from the U.S. and the California ports, and gross quantity and value of air and vessel shipments. The total of air and vessel quantity statistics may exceed those for the port districts since these 'method of transportation' columns reflect gross weight, rather than the net weights shown in the U.S. and California Port District totals. Users are again cautioned to avoid assuming that all product movement through the port districts reflects production occurring in California.

The final table, Table 8., lists products that are not treated individually in Table 5 of the Annual Bulletin. Commodities that are not produced commercially in California have been excluded, so the totals presented do not coincide with similar lists published by the Foreign Agricultural Service.

Additional details on exports of other commodities of interest to California or on shipments to countries not included in this report may be obtained on a request basis from the Bureau of Agricultural Statistics, 1220 N St., Room 243, Sacramento, CA 95814.

NOTES TO THE STATISTICAL APPENDIX

SOURCE: The tables in this appendix were prepared from data extracted from the U.S. Department of Commerce, Data Tape EA622, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination by Customs District of Exportation by Economic Class and Method of Transportation.

Table 6: "Agricultural Exports: U.S. and California Port District Totals" summarizes data for 1983 exports of over 140 agricultural products by destination.

1. "California Ports Quantity" is net units of product at the port of exportation.
2. Countries with purchases of less than $5,000 of a specific commodity are totaled and included as "Other".
3. The sum of all individual country values for a commodity may differ from that presented under "Total" due to rounding.
4. Statistics for California port districts should be applied carefully since value and quantity for products shipped from Calfornia ports could include production originating in other states.

Table 7: "1983 Annual Exports by Country" details exports to 25 countries, selected by the total value of their U.S. purchases of 400 agricultural products of commercial interest to California.

1. Individual commodities are ranked within each country by the total U.S. purchase value of the commodity.
2. "U.S. Total Quantity" and "California Ports Quantity" are net quantity at the port of exportation.
3. "Vessel Quantity" and "Air Quantity" are gross weights at the port of exportation, and may total more than "U.S. Total Quantity" or "California Ports Quantity".

Table 8: Other Agricultural Commodities Exported thru U.S. and California Port Districts provide supplementary data for the commodities not included in Table 5.

1. A modified production share approach was used in calculating the contribution of these commodities to California's agricultural exports, as explained in the introduction to Table 5 in the Annual Bulletin.

CALIFORNIA VEGETABLE CROPS

This bulletin, prepared annually, contains the most recent estimates of acreage, production, and value for principal commercial vegetables, melons, and strawberries grown in California for the period 1982-83. Harvested acreage by county is included. Also included are tables showing 1982-83 monthly prices and sales for a number of the fresh market vegetable crops.

The vegetable and melon estimates encompass commercial production only and exclude home and farm gardens. Vegetables grown for seed are also excluded. Potato and sweetpotato estimates are shown but are excluded from the summary of all vegetable crops.

Prices for processing crops and processed segments of dual utilization crops are based upon equivalent returns at the processing plant door. For fresh market sales, the price is on a packed and loaded basis, F.O.B. shipping point.

Data presented in this publication are made possible by the cooperation of growers, processors, shippers, and other representatives of the California vegetable industry. Their cooperation is appreciated.

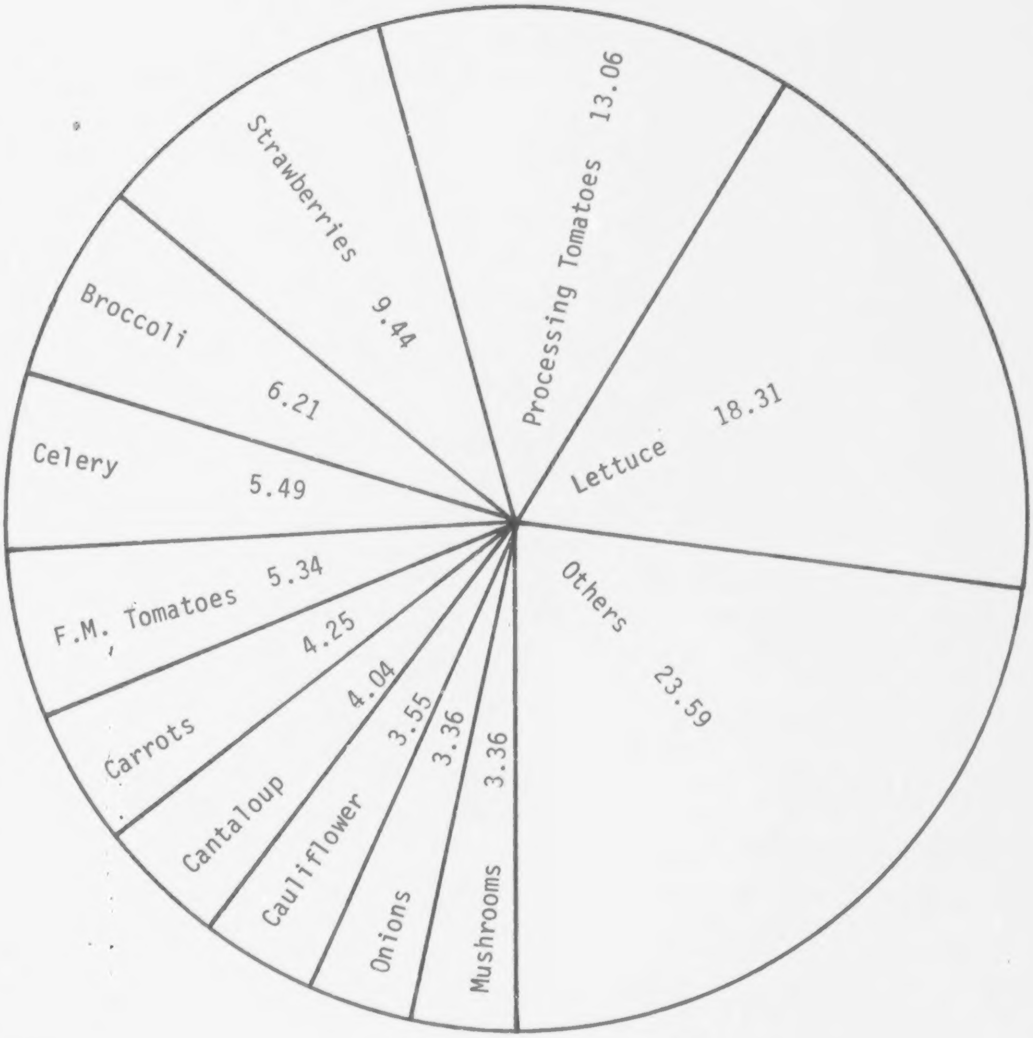
IMPORTANCE OF CALIFORNIA'S LEADING VEGETABLE CROPS - 1983*



*Based on value of production, excludes potatoes and sweetpotatoes

1983 SUMMARY

California produced 13.5 million tons of vegetables from 952,546 acres in 1983. Value of production was a record $2.96 billion compared to $2.84 billion in 1982.

Total production was down 2 percent from the 1982 harvest of 13.8 million tons. Most crops showed production near or below 1982. Production was notably reduced for celery and onions. The production of cauliflower, sweet corn and honeydews showed considerable increases from last year with cauliflower and honeydew crops setting production records.

Season average prices for 1983 were slightly higher than in 1982 with celery and mushrooms showing large increases. Average value of production was $3,106 compared with $3,021 per acre in 1982.

California in 1983 produced 51.5 percent of the principal fresh market crops and 58.5 percent of the seven major processing crops.

CALIFORNIA VEGETABLES AND MELONS: Acreage, Production and Value, 1974-83

1/ For processing crops and the processed segment of dual utilization crops, price is based on equivalent returns at the processing plant door. For fresh market crops, price is on a packed and loaded basis, f.o.b. shipping point.

2/ Production includes some quantities not marketed because of shrinkage and loss. Shrinkage and loss excluded in computing value. Onion -- 1982 -- 220,000 cwt; 1983 -- 210,000 cwt.

3/ Miscellaneous vegetables cover a number of other vegetable crops not published separately. Included in this group are artichokes, green lima beans for processing, cabbage, cucumbers, garlic, green onions, oriental vegetables, bell peppers, watermelons, etc.

4/ Potatoes and sweetpotatoes are not included. These crops are included in field crop otals.
